<i>Vitesse maxi</i>	199 km/h 124 mph	209 km/h 130 mph	206 km/h 128 mph	218 km/h 135 mph	222 km/h 138 mph	207 km/h 129 mph	232 km/h 144 mph

Body

Cx 0,293

Frontal area 2,20m²

Renault Laguna III for Racer, **CG version**.

It's recommended to use RC5+ version to have ESP and automatic handbrake working well.

For variants (Colors ,engines, rims) just run "configurateur.jar" .

List of available scripts :

- ESP (see page 4)
- Automatic handbrake (see page 4)
- Cruise control/speed limiter (see page 5)
- Panoramic (page 7)
- 4 Control
- Indicators (page 7)

ESP :

The scripts manages both TC and ABS, you can disable the TC by pressing key A (it will show you an message on interior dashboard).

The TC automatically wakes up when you reach a speed higher than ~40km/h

Automatic handbrake :

This script allows an automatic handbrake, to use it press spacebar, the script avoid wheel looking.

What does it do?

If the car is parked on a uphill, to start just engage a gear (when handbrake is locked). Then throttle, when the car will start, the handbrake will automatically disable

Cruise control :

The script manages both functions :
speedlimiter and cruise control.

It don't work if the speed is lower than
30km/h and max speed is 200km/h

Keys are :

- B to switch between cruise/limiter/off
- J to increase target speed
- K to decrease target speed
- M to get the saved speed

For cruise control use, reach a speed near
your target speed, then relase throttle and
enable cruise

If you want to overtake, just press enough
the throttle.

The script goes to "memory" mode, if you
run below your target speed, the cruise
automaticly turns on, and keep you at your
target speed .

For speed limiter use, it is the same way as the cruise use, but to disable it you will have to press the throttle near 100%

Automatic gearbox (2.0dCi)

It works like an real one :

In D mode, just play with the throttle, the N mode keep the car in neutral and R is for reverse of course.

You can have the semi automatic mode, called Impulsionel, you can shift with the default keys then.

Each mode is shown inside the car, in the dashboard's screen.

The keys are :

- Z to switch between Drive and Semi auto
- R to switch revserse (speed < 5km/h and brake pushed)
- N for neutral

Panoramic (Optional)

The keys are :

- W to open
- X to close

Indicators (script by Johnthelemon)

The keys are :

- E for right indicator
- Q for left indicator
- T for hazard lights : when hardbarking they automaticly turns on

Don't convert this car for other games without my permission !

Don't use any part, or textures of it without my permission !

Don't sell the 3d model !

Brakes caliper from Forza 3

Special thanks to jeeP (inspiration, usefull tips), cosmo° (help for ini), Ruud Van Gaal for Racer.

Special thanks to foxboro, very nice tutorial for scratch made tyre texture : <http://www.gta-mania.com/forums/f73/un-pneu-modelisation-et-surtout-texturisation-t6887.html>
